

STORMWATER INSPECTION & MAINTENANCE SERVICE

RELIABLE, COMPLIANCE-FOCUSED STORMWATER CARE FOR TENNESSEE

Stormwater oversight in Tennessee continues to increase due to rapid growth, redevelopment, and enforcement of NPDES Phase II permit requirements. Property owners, managers, and developers are being asked to prove that their stormwater systems are inspected, compliant with local and state requirements, maintained, and performing as intended. Our focus is simple: complete the inspections you need, provide clear documentation, and perform maintenance only when required to keep your systems functioning and compliant, nothing more complicated or unnecessary.

Our compliance service is ideal for SCMs, such as water quality units, dry and wet ponds, underground detention and infiltration systems, bioswales and bioretention areas, permeable pavements, pretreatment structures, inlets, outlets, and conveyance systems. Jen-Hill keeps every system performing at its best, and safeguards your infrastructure investment. Quarterly, semiannual, or annual service plan options are available.

WHO BENEFITS FROM THESE SERVICES

- **Commercial Property Owners:** affordable, compliance-focused services that reduce risk, prevent flooding, and avoid costly fines.
- **Property Managers:** reliable inspections and documentation without adding workload to your internal teams.
- **HOAs and Community Associations:** consistent care for ponds, drainage systems, and community stormwater assets.
- **Retail and Industrial Sites:** prevention of parking lot flooding and reduction of liability.
- **Civil Engineers:** an inspection and maintenance partner that supports long-term performance of your designs.
- **Municipal Partners:** clear documentation that reduces enforcement workload.

COMPLIANCE SERVICES WE PROVIDE

REQUIRED STORMWATER INSPECTIONS

Our certified inspectors evaluate all post-construction stormwater control measures, including:

- Water quality units
- Dry and wet ponds
- Underground detention and infiltration systems
- Bioswales and bioretention areas
- Permeable pavements
- Pretreatment structures
- Inlets, outlets, and conveyance systems

Each inspection includes:

- Full site walk-through
- All documentation is formatted for easy submission to municipalities.
- Photo documentation
- Sediment and debris measurements
- Clear recommendations only when maintenance is necessary

Quarterly, semiannual, or annual options available.

MAINTENANCE AND CLEANING SERVICES

- Sediment and debris removal
- Vactor cleaning of water quality units and ponds
- Vegetation control and plant replacement for bioretention systems
- Inlet/outlet cleaning
- Filter cleaning or replacement
- Restoration of permeable pavement infiltration

DOCUMENTATION UPDATES

- Inspection logs
- Photo records
- Maintenance reports
- Compliance checklists
- Storage of documents for easy retrieval

NOTICE OF VIOLATION ASSISTANCE

- Communicate with the municipality on your behalf
- Provide documentation and remediation plans
- Coordinate repairs and ensure issues are resolved quickly and cost-effectively
